

DESIGN PLANS - BETTER FUTURE SCALE: 1:50

Better Future

The effects of climate change are already being felt around the world: natural disasters, endangered species and scarce resources.

We have to inspire and mobilize people to build a better future for the next generations.

In the project, the central area is the natural landscapes that were destroyed by misguided human actions. Trees give way to metal sculptures, rivers follow changed courses and are represented by a mirror water with straight lines, ground covers are artificial.

In the surroundings, the project aims to reduce deforestation, encourages sustainable forest management and rescues biodiversity in landscapes.

Governments, companies, communities and individuals need to come together to ensure the future of the planet. We can build a better future.
